# European Sales Dashboard | Excel

| | |
|---|---|
| **Author** | Aditya Kushwaha (Excel practice project) |
| **Data source** | EU Superstore sample dataset (Tableau sample data, as published at github.com/Taweilo/EU_Sales_Dashboard). 10,000 order lines, 5,122 orders (4,596 distinct Order IDs), 795 customers, 15 countries, Jan 2015 – Dec 2018. |
| **Currency** | Sales and profit are shown in EUR (the source file has no currency column; EUR is assumed for a European dataset). |

## Data cleaning steps

| | |
|---|---|
| **1** | Checked for blanks and duplicate rows: none found in Orders (0 missing values, 0 duplicate rows). |
| **2** | Removed duplicate order IDs from the Returns list so each returned order counts once. |
| **3** | Found that 473 Order IDs are reused for different customers on different dates, so an order is defined as Order ID + Order Date + Customer ID (5,122 orders). Sorted lines by these keys so all lines of an order sit together. |
| **4** | Added calculated columns on the Orders sheet: Year, Month, Ship Days, Discount Band, Returned (lookup to Returns), Profit Margin, and New Order (1 on the first line of each order, used to count distinct orders). |

## How to use

| | |
|---|---|
| **Dashboard** | Pick a Country and Year from the yellow dropdowns. KPIs, tables and charts recalculate through SUMIFS formulas. |
| **Analysis** | Full-data tables: yearly trend and CAGR, country margin and average discount, sub-category profit, discount bands, segment, region and shipping. |
| **Named ranges** | Formulas use named ranges (Sales, Profit, Country, Year, Category, Band, NewOrder …) that point to the Orders columns. |
